

4.13

## Two Snake-Cat Associations

## Rubber-Band Action

4.14

**4.13** A cat's animated movement can be suggested by other animals or substances. A quality may apply to only one part of the action; thumbnails are labeled so that these associations may be translated into the animated scene.

**4.14** The first cat is handled conventionally; the second one's movements incorporate associations with liquid, rubber bands, and a meatball.
